

## B. BRAUN MEDICAL GENERAL POLICY

*We protect and improve the health of people around the world, in a constructive dialog with our customers and partners.*

« B. Braun Medical is the French subsidiary of the German family group B. Braun, specializing in the design, production and marketing of medical devices and pharmaceutical products.

The principle of the B. Braun Group, "Sharing Expertise", reflects our commitment to continuous exchange with all of our stakeholders. Our three values – innovation, efficiency and sustainability – are shared by all of our employees and guide us in our mission of preserving and improving the health of people all over the world.

Based on those values, the strategic orientations of the B. Braun Group has the ambition to make B. Braun Medical a key partner in the healthcare system. A greater visibility and a better understanding of our customers and their needs will help develop a genuine customer proximity.

It is for us to optimize our product portfolio and services and to offer innovative solutions for better care for patients.

In its **Saint-Cloud** headquarters and logistics platform in **Ludres**, B. Braun Medical aims to optimize business and distribution practices on the French market. In our global production sites **Nogent-le-Rotrou**, **Saint-Jean-de-Luz** and **Chasseneuil-du-Poitou**, where medical devices are designed and manufactured for the international market, innovation, productivity and simplification are placed as essential drivers of development and promote the profitability of the company.

Compliance is a strong commitment of the B. Braun Group. Regarding the distribution activity on the French market, reliability and ethics of our relationships with healthcare professionals are guaranteed by the respect of an internal code of conduct and certification since 2011 of our sales promotion activities of medicinal products towards the French health authorities' repository.

Regarding production activities, compliance with legal, regulatory and standards requirements, including 93/42/EEC directive and UE 2017/745 regulation on medical devices, implementation and maintenance of the effectiveness of ISO 9001 and ISO 13485 quality systems as well as the adhesion to the MDSAP certification program according to the sites concerned, allow our products to fully meet the relevant safety standards. The contribution of clinical and health economic evidence of the efficiency and safety of our products work towards trust and transparency too.

B. Braun Medical is committed to its employees. We encourage collaboration, skills development and qualification by promoting lifelong learning and internal mobility. Their safety, the commitment to provide safe and healthy working conditions, compliance with legal and other requirements and obligations in the field of health and safety, and continuous improvement of our performance, are key principles of the ISO 45001 certification for all of our sites.

Our commitment to environmental protection is reflected in the ISO 14001 certification of our sites, effective since 2010. In fact, meeting of our compliance obligations, progressive reduction of pollution and controlling of our consumptions linked to our industrial, logistic and administrative activities, remain ongoing challenges.

This policy, reviewed annually as to its appropriateness, is applied on each of our sites in the form of a local policy, available to the public as well as our customers and suppliers, and to everyone in the company. The Management of the Company ensures its proper implementation, defines the objectives and provides the resources necessary to their successful achievement. »
